Education

Wilfrid Laurier University

Sep 2023 – May 2028

Bachelor of Science - Computer Science (PEP Program)

Waterloo, ON

- **Relevant Coursework:** Data Structures I, Data Structures II, Object-Oriented Programming, Data Visualization
- **Involvement:** Laurier Computing Society (General Member)

Technical Skills

Languages: Python, C/C++, JavaScript, TypeScript, SQL, Java

Data & Analytics: NumPy, Pandas

Web Development: HTML, CSS, Node.js, Express.js, MongoDB

Tools: Git, GitHub, Docker, VS Code, Eclipse, MS Office

Work Experience

ServiceLoop

2025 – Present

Software Developer

Startup

- Collaborated with a team to build a **full-stack SaaS CRM** for service businesses, enabling companies to manage customers, track sales pipelines, and automate outreach campaigns.
- Developed a **customer segmentation system** to filter and group clients by activity status, tags, and engagement history for targeted outreach.
- Implemented a **CSV import system** that parses and validates customer data, enabling bulk uploads of client records into the platform.
- Integrated **Google Gemini AI** to generate personalized outreach messages and customer insights, improving campaign targeting for businesses.

Projects

ScholarMatch | Python, Pandas, NumPy

- Developed a **Python scholarship matcher** that processes **9,500+ scholarships** and filters matches based on user profiles and likelihood of attainment.
- Built a **NumPy-powered scoring algorithm** that calculates match scores (0-100) by weighing **6+ factors** including GPA, major, demographics, and deadline proximity.
- Implemented **Pandas data cleaning** to handle missing values, parse dates, and standardize field names across **10+ scholarship attributes**.
- Applied **OOP principles** to model User and Scholarship classes with validation, serialization, and file I/O for JSON/CSV persistence.

Team Stats Analyzer | C++

- Built a **C++ analytics tool** that processes **3,500+ Premier League matches (2010–2021)** and automatically generates ranked team tables.
- Implemented custom **evaluation algorithms** analyzing **12+ performance metrics** including possession, shots on target, corners, and passes.
- Applied **OOP** to model **20 teams per season** and compute totals, averages, and trend-based insights across **11 seasons**.
- Designed a **file input system** that dynamically loads CSV files, supporting expansion to future seasons without modifying program logic.

ClientSync | JavaScript, Node.js, Express, MongoDB

- Built a **full-stack client management platform** for freelancers, enabling organized tracking of clients, projects, notes, and progress.
- Developed **RESTful API endpoints** with Node.js/Express and integrated MongoDB for scalable data management.
- Created a **responsive dashboard UI** with dark/light mode for desktop, tablet, and mobile.
