Education

Wilfrid Laurier University

Expected May 2028

Bachelor of Science in Computer Science (PEP)

Waterloo, ON

- Coursework: Data Structures I/II, Object-Oriented Programming, Data Visualization, Software Engineering.

Projects

ServiceLoop — TypeScript, Supabase, PostgreSQL

- Built a CRM for service businesses to manage customer records, track pipeline activity, and automate outreach from one workflow.
- Designed segmentation logic using activity status, tags, and engagement history to organize customers into targeted outreach groups.
- Added CSV import and validation for bulk onboarding, including parsing, schema checks, and data normalization before records were stored in the database.
- Integrated Gemini to generate outreach drafts and account summaries within the CRM.

ScholarMatch — Python, Pandas, NumPy, Matplotlib

- Built a scholarship matching tool that ranked 200+ scholarships against student profiles, reducing the need for manual review.
- Created a NumPy scoring model that calculates 0–100 fit scores across 6+ factors, including GPA, major, deadlines, and eligibility constraints.
- Cleaned and standardized scholarship data across 10+ fields with Pandas so matching results stayed consistent across incomplete inputs.
- Added validation and JSON/CSV serialization for user and scholarship data to keep the pipeline easier to debug and extend.

Team Stats Analyzer — C++

- Built a C++ analytics tool that processed 3,500+ Premier League matches across 11 seasons to generate ranked tables and trend outputs.
- Implemented comparison logic across 12+ match metrics, including possession, shots on target, corners, and passes, for side-by-side team analysis.
- Structured the program with OOP models and dynamic CSV ingestion so new seasons could be analyzed without changing the core code.

Experience

Tire Technician

May 2024 – Jul 2024

Tire Team Centres Inc.

Waterloo, ON

- Performed tire inspections, rotations, and mounting services while following shop safety procedures and quality standards.
- Diagnosed tire related issues and communicated findings to service advisors so customers received accurate recommendations and faster service.

Crew Member

Apr 2022 – Apr 2023

McDonald's

Kitchener, ON

- Handled order flow and customer interactions during peak hours while maintaining food safety and service standards.
- Trained new team members on daily procedures and helped keep service consistent across shifts.

Technical Skills

Languages: Python, SQL, C++, JavaScript, TypeScript

Frontend: HTML, CSS

Backend & Data: Supabase, PostgreSQL, MongoDB, Node.js, Express.js, Pandas, NumPy, Matplotlib

Tools: Git, GitHub, VS Code, MS Office
